

V-BANK FILTER

Introduction

The V-Bank filter is a high-capacity, extended surface air filter designed for high airflow applications. Its rigid ABS frame and synthetic media deliver low initial pressure drop, long service life, and consistent F9 filtration performance in demanding HVAC environments.

Uses

Ideal for use in air handling units, HVAC systems, and high-airflow ventilation installations. Commonly applied in commercial buildings, hospitals, data centres, clean manufacturing areas, and industrial facilities where high dust holding capacity and reliable fine particle filtration are required.

Overview

Efficiency	F9 (≥95%)
Specifications	Mini pleat, Plastic frame, Synthetic media (MZ/P).
Features	Long service life - More media area, low pressure drop. Environmentally friendly. MZ/P 100% incineration. Space saving - For the compact structure of center air conditioner systems / MZ/P UL900 Compliant.
Applications	Larger variations are allowed in air flow and pressure drop without affecting filter performance and efficiency. It is ideal for HVAC constant volume applications..
